

You will have at least 15 minutes to complete the quiz. You may use a calculator for computations, but your process must still be evident in the work you show. SHOW YOUR WORK. Also, there is a backside.

1. [4 pts] The graph of  $f(\theta)$  is shown below. This function  $f$  describes the height of the rider of a Ferris wheel. That is, if the rider is  $\theta$  degrees from the horizontal then their height is  $f(\theta)$  feet from the ground.

- (a) What is the equation for  $f(\theta)$ ?

$$f(\theta) = 200 \sin(\theta) + 400$$

- (b) What is the radius of the Ferris wheel?

200 feet

- (c) What is the height of the center of the Ferris wheel?

400 feet

2. [4 pts] Consider the circle shown on the right.

- (a) What are the coordinates of the point  $p$ ?

$$\left( 2 - \frac{3}{\sqrt{2}}, 1 - \frac{3}{\sqrt{2}} \right)$$

$$\left( -0.12, -1.12 \right)$$

- (b) What are the coordinates of the point  $q$ ?

$$\left( 4.898, 0.223 \right)$$

$$3 \sin(15^\circ) = 0.775$$

$$3 \cos(15^\circ) =$$

3. [4 pts] An airplane takes off a runway at an  $8^\circ$  angle from the runway. There are 2000 feet of runway remaining once the airplane takes off. How high is the plane once it reaches the end of the runway?

$$\tan(8^\circ) = \frac{h}{2000}$$

$$h = 2000 \tan(8^\circ) = 281.1 \text{ ft}$$
